

Figure S1 Mean and standard error of % weight consumption of control and experimental prey species after 144 h. Experimental prey species were exposed to cowries while control prey species were isolated from predators in an adjacent wet table.

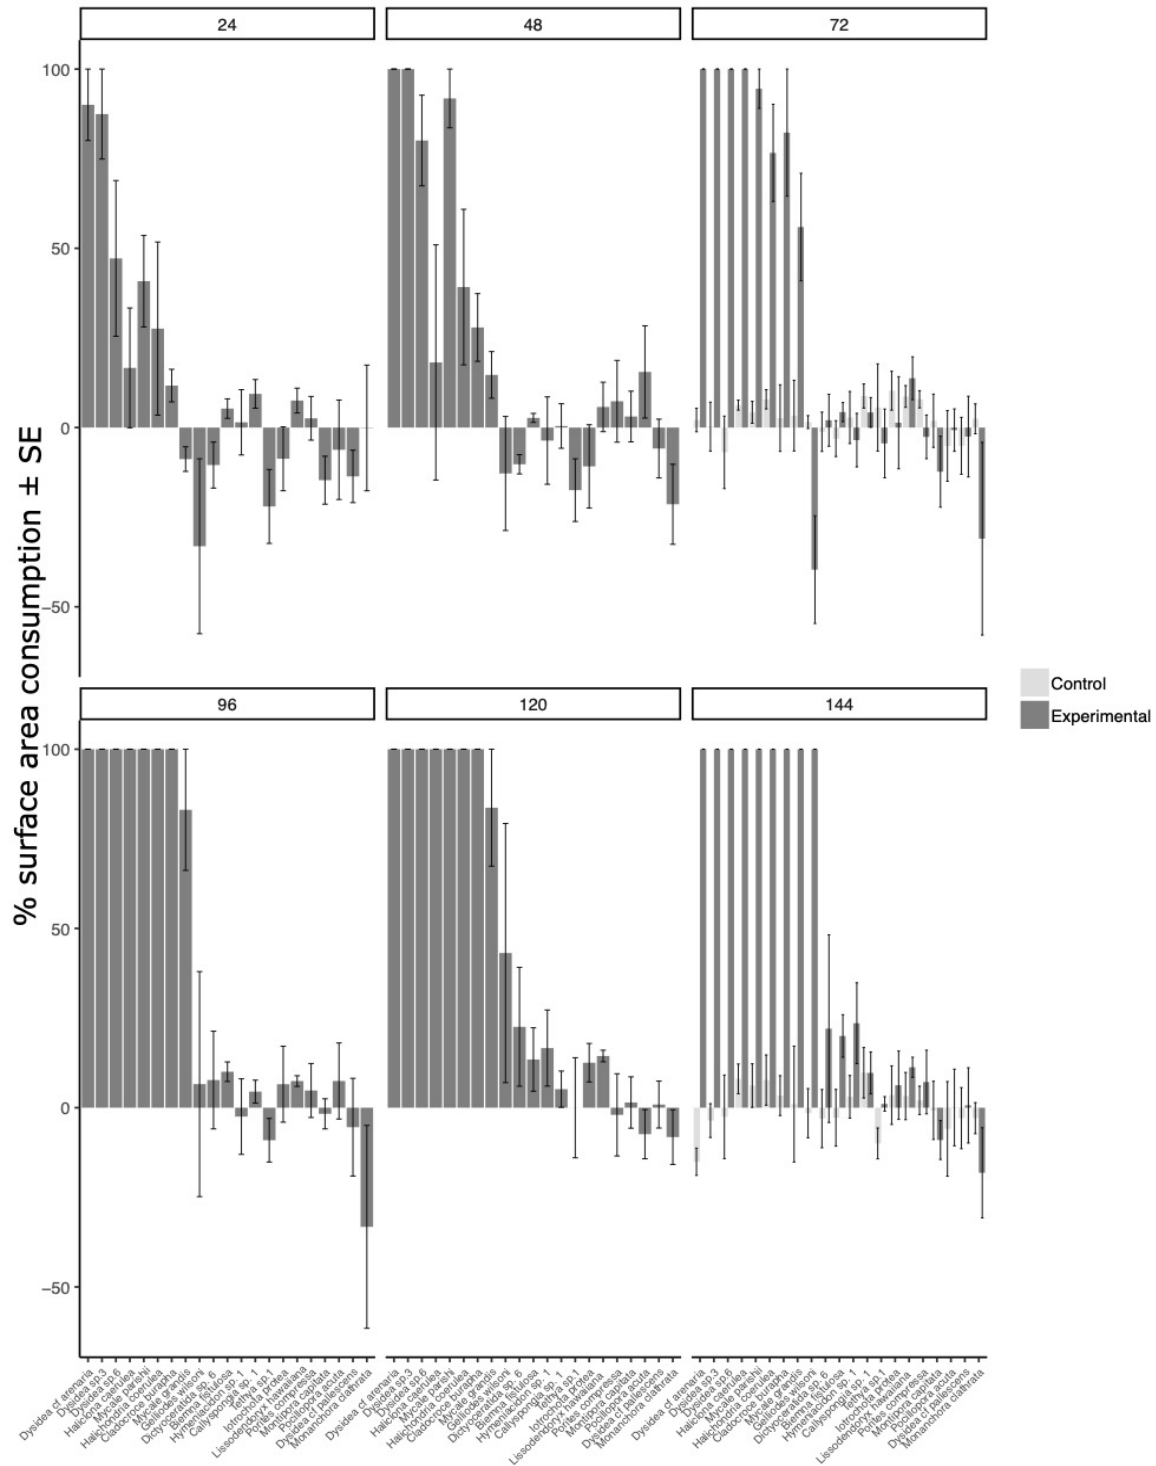

Figure S2 Mean and standard error of % surface area consumption (%) of sponge species that were completely consumed, at 24-h intervals over 144-h period. Experimental prey species were exposed to cowries while control prey species were isolated from predators in an adjacent wet table.
