

The following supplements accompany the article

Patterns and trends in marine population connectivity research

Dale N. Bryan-Brown*, Christopher J. Brown, Jane M. Hughes, Rod M. Connolly

*Corresponding author: dale.bryan-brown@griffithuni.edu.au

Marine Ecology Progress Series 585: 243–256 (2017)

Supplement 1. Detailed paper processing methodology. Paper processing was broken down into several steps.

- 1) All papers yielded from the search were downloaded and imported into EndNote.
- 2) Duplicates were deleted.
- 3) Papers that were obviously irrelevant to the study (e.g. papers published in the Journal of Petrology) were deleted (after ensuring irrelevance by assessing Title and, if needed, Abstract).
- 4) PDF's were downloaded using EndNote's "Find Full Text" feature with Griffith University staff access.
- 5) Only papers that had a PDF file were considered during the manual checking stage. Manual checking ensured that all papers in the database met the definition of MPC as outlined in the paper.

Supplement 2. All research papers included in database, articles in **bold** are highly cited (>10 citations per year)

- Abookire AA, Bailey KM (2007) The distribution of life cycle stages of two deep-water pleuronectids, Dover sole (*Microstomus pacificus*) and rex sole (*Glyptocephalus zachirus*), at the northern extent of their range in the Gulf of Alaska. *J Sea Res* 57:198–208

Supplement 3. Full list of all taxa (Phyla, Class and Family) in dataset

Each row is the count of how many studies included an organism at the given taxonomic level

Taxa denoted with * are not taxonomically ranked at the given level, but the ranking was helpful in identifying taxonomic trends.

e.g. The Order *Testudines* was used as a Class as it was more informative than Reptilia (which would include marine Squamates and Crocodilians)

| Phyla | Class | Family | Count |

Supplement 4. Full list of habitats in dataset

| Habitat | No. of studies | Habitat | No. of studies |
|---------------------------|----------------|-----------------------------------|----------------|
| Unstated | 246 | Freshwater-Freshwater | 14 |
| Coral reefs | 231 | Estuarine-Marine | 11 |
| Freshwater-Marine | 152 | Unspecified deep sea (>1km depth) | 11 |
| Rocky Intertidal | 120 | Hydrothermal vents | 10 |
| Hard bottom | 99 | Saltmarsh | 10 |
| Estuarine | 92 | Marine lagoon | 8 |
| Seagrass beds | 70 | Sea mount | 8 |
| Soft bottom | 59 | Mussel reefs | 5 |
| Open Pelagic | 44 | Other biogenic | 5 |
| Mangrove | 38 | Oyster reefs | 5 |
| Algae | 37 | Deep Coral | 3 |
| Terrestrial-based fauna * | 34 | Terrestrial-Intertidal | 1 |
| Soft intertidal | 31 | Worm reefs | 1 |
| Man-made | 18 | | |

* e.g. turtles, penguins and seals – unique in that it links terrestrial and marine systems, but highly restricted to culturally significant (mega)fauna
